The ASI Data Science Summer 2015 Fellowship applications are open. To apply, simply fill in the online application.

If you're wondering whether the academic path is right for you, but cannot imagine wasting the technical skills you've developed over the course of your PhD, you might want to consider a career in data science, 'the sexiest job of the 21st century' according to Harvard Business School.

Data science is the set of skills and techniques necessary to find, store, process and draw insights from the vast quantities of data now available.

In your PhD, you received an amazing training in 90% of the skills required to be a data scientist - things like collecting and interpreting data, testing hypotheses and communicating results. All that's needed is for you to excel in an exciting new career is to acquire the remaining 10% - the industry specific skills. This is where the ASI can help.

The ASI Data Science and Business Analytics Fellowship is a completely free and highly selective programme in data science and data engineering for outstanding PhDs and post-docs from world’s top universities. It consists of an 8 week programme with a comprehensive curriculum developed in conjunction with industry and academic partners. The curriculum emphasises technical skills, soft skills and industry projects with our partner companies. Our Fellows strive to solve challenging data-related problems that add real business value. Current Fellowship mentors include Directors from eBay, Teradata, Cloudera, O'Reilly and more.

The course starts on the 6th of July 2015. Places are extremely limited and we will be accepting Fellows on a rolling basis, so we urge you to apply as soon as possible.
