Still looking for an elective for 4th term?

Dear All,

If you are still looking into which courses to take for the 4th term, and have room for a 2 credit elective that explores ways to help ameliorate the current retraction epidemic of scientific articles, we might have something interesting for you to consider:

In the interdisciplinary course “ANATOMY OF SCIENTIFIC ERROR" (PH.260.701), you will

- Learn about the nature of errors is science
- Explore approaches to error reduction
- Get to do science detective work
- Discuss current topics of practical science ethics on an organizational, societal and global level
- Do a project on errors and serendipity in discovery and innovation

This year, the course is offered in online format and is part of the R3 Initiative, which aims to bring more critical thinking and a broader, interdisciplinary view into public health-, biomedical-, technology- and engineering workforce training.

Curious? Check it out!

If you would like to learn about other upcoming classes, click here for more R3 courses and events, or contact me by email (gbosch2@jhu.edu). The R3 website will be updated regularly as more courses become available.

Hope to see you around!
