Subject: PhD-level openings at RAND

Dear Professor Bandeen-Roche:

I am writing to ask for your help in identifying candidates for one or more PhD-level openings in the RAND Statistics Group. Location options include Santa Monica, CA (RAND's Headquarters) and Washington, DC.

As a leading public policy organization focusing on quantitative research, RAND offers an exciting setting for a statistician, with opportunities to collaborate on multidisciplinary teams; to conduct research on statistical methods; to consult; and to teach. Research projects address issues in a variety of disciplines, including health, national security, criminal and civil justice, education, and population and regional studies. RAND projects typically pose novel statistical challenges in design, sampling, measurement, modeling, analysis, and computing. In addition, our group of 17 PhD statisticians and eight Masters-level statisticians provides a collegiate and stimulating environment. We welcome recent graduates as well as senior candidates.

More details concerning the application process are available at www.rand.org/statistics/jobs.html or in the enclosed September Amstat News advertisement. The statistics group Web site, www.rand.org/statistics, provides more information about the group and its members. Please encourage prospective PhD applicants to apply by December 15, 2009.

In addition to full time positions, we also have summer associate positions available for doctoral students. Our summer associate program is a great opportunity for students to conduct applied statistical research in the context of policy or social science research. To receive full consideration, applications should be received by January 15, 2010. More information on these positions is available on www.rand.org/about/edu_op/fellowships/gsap.

I would be pleased to provide further information by email or phone. Thank you for your assistance.

Sincerely,

Susan Paddock, Ph.D.
Head, Statistics Group
RAND Corporation
