Visiting Data Scientist at NASA JSC Sponsored by TRISH

The Translational Research Institute for Space Health (TRISH) is offering an out-of-this-world opportunity for a visiting data scientist position located at NASA Johnson Space Center in Houston, TX. This two-year sabbatical or other career development leave allows the visiting data scientist to apply computational data analysis methods and techniques to challenges in astronaut health and performance. The selected individual will work with NASA scientists and personnel to identify trends in the health of astronauts and impact future crew health as NASA prepares to send humans to the Moon and Mars.

The opportunity lasts for two years and is offered as a grant from TRISH to the visiting scientist’s home institution. Program specific details and how to apply for this opportunity can be found at: https://spacehealth.bcm.edu/prog/flex-1901/.

Please email SpaceHealth-Info@bcm.edu for additional information.
