BIOSTATISTICIAN - RESEARCH FACULTY

The Department of Biostatistics and Informatics in the Colorado School of Public Health is hiring one or more research faculty for the campus’ consulting/collaboration center, the Colorado Biostatistics Consortium (CBC). The CBC is recruiting collaborative research faculty biostatisticians to collaborate with the Department of Emergency Medicine, the College of Nursing, and other School of Medicine Departments. Faculty in these positions are core research faculty in the Department of Biostatistics and Informatics with a primary function of supporting the collaborative and consulting missions of the department and center. These positions will join 10 other PhD faculty in the CBC and over two dozen faculty and research personnel in the Department of Biostatistics and Informatics.

These positions require a PhD degree and 2+ years of collaborative experience. They are expected to become a significant contributor in their collaborations, partnering to define and shape the research direction of the team. This position collaborates with investigators on the design and analytical aspects of the research process, including: design of new studies, structuring data collection systems, the application of state-of-the-art methodologies, analyses, and preparation of abstracts, oral and poster presentations, and scientific manuscripts. Depending on the particular collaborations, interesting biostatistics research opportunities may arise, although it is not the emphasis of the position. It is a team science position. Experience with electronic health records, health informatics, or ‘omics are desired, but applications with different areas of expertise will also be evaluated. Research Faculty are non-tenure eligible. Details are available with individual inquiry.

First review will occur October 15, 2017, but the position will remain open until filled.
