University of Washington: Post-doctoral fellow in Alzheimer’s Disease research

Applications are invited for a two-year, renewable post-doctoral position at the University of Washington in Seattle to develop and implement advanced, innovative statistical methods for research in Alzheimer’s disease and related dementias. Candidates should hold a PhD or equivalent doctoral degree in statistics or biostatistics. We are particularly interested in applicants who have experience and interest in: longitudinal data analyses; causal modeling; and big data analysis. However we will consider applications from other related research areas.

The successful applicant is expected to participate actively both in collaborative research projects and applied methodological research. Successful applicants are highly motivated, dependable, and have excellent communication and writing skills. Strong programming skills are required. The appointments will be to a National Institute on Aging T32 funded training program. As such, all funded positions require U.S. citizenship or permanent residency for eligibility. Applications will be considered until the position is filled.

To Apply: Please e-mail the following materials, Attention: Alzheimer’s Disease Training Grant, to wamble@uw.edu:

- Letter containing a summary of research experience to date, career goals, and objectives of your proposed research as it relates to Alzheimer's disease and related dementias. Please include in your cover letter a statement regarding your US citizenship and/or permanent resident status. Also provide contact information for the applicant including email, postal address, and mobile phone number.
- Three letters of recommendation. Please have the persons writing the letters email them directly to wamble@uw.edu.
- An NIH biosketch that describes any prior NRSA support, honors or awards, previous publications, GRE or MCAT scores, and a summary of academic records.
