Department of Molecular Microbiology and Immunology

FREDERIK B. BANG AWARD FOR STUDENT RESEARCH
THREE $2,500 AWARDS

Students from any department in the Bloomberg School of Public Health, who have passed their preliminary oral examination and are engaged in doctoral research in the area of pathobiology, defined as "any topic in biology relevant or related to the understanding of the mechanisms of disease," are eligible for support from the Frederik B. Bang Award for Student Research. Three students will be selected to receive an award of $2,500 based on the originality, scientific merit and feasibility of the research project, either proposed or in progress. The award funds may be used to defray approved research-related costs. The award start date will be 7/1/2018 and will run for 1 year to 6/30/2019.

The application (maximum length of 3 pages) should describe briefly the proposed research, its significance and the methodology to be used. The application must make clear what work has been done or will be done by the applicant. In addition, if it concerns research in progress, any results obtained which may be relevant to future work should be given. The judging committee may want to interview individual candidates to obtain a better understanding of the project and the student's contribution to it. A recommendation letter from the student’s mentor should be included.

Applications should be submitted to:
Maryann Smith, assistant to Dr. Arturo Casadevall, Chair
