Data Analyst

The Drexel University School of Public Health is seeking a Data Analyst in the Urban Health Collaborative. The position requires a detail-oriented and organized individual who will conduct data programming, management, data documentation, and statistical analysis activities for several large, multisite, and international urban health-focused research projects. This position will primarily assist with data programming and management tasks including data cleaning, quality checks, and linkage and maintain detailed documentation. This position will also assist with statistical analyses for manuscripts and abstracts for peer-reviewed journals and conferences. The Data Analyst will work closely with the study Principle Investigators and biostatisticians for multiple research projects. The ideal candidate will have a master’s degree in statistics, biostatistics or related quantitative field, 1+ years experience managing and analyzing data for complex multisite research, and knowledge of SAS, Stata, and/or R, working knowledge or ability to quickly learn other programming languages as needed.

Interested applicants: Please send resume to Kari Moore, Director, Data and Analysis at kam642@drexel.edu
