The JHU Water Institute seeks a postdoctoral fellow for our global project using mobile phones to measure Water Sanitation and Hygiene indicators (mWASH), that is part of Performance Monitoring Accountability 2020 (pma2020.org). This is a high impact, high profile public health study that is designed to drive global policy at the nexus of women’s empowerment, water, sanitation, and hygiene. The mWASH project consists of nationally representative biannual household surveys in 10 countries in Africa and Asia, with local research institutional partners in each country that hire high-school educated women to use smart phones to conduct household and health care facility interviews, sending data to cloud servers for rapid analysis and dissemination. Visit our website http://water.jhu.edu/join-us/mwash-global-indicator-post-doctoral-fellowship/ to read the full announcement. Applications are still being accepted.

Thank you,

Priscilla Owusu
