

The Cleveland Clinic Health System (CC) is searching for a doctoral level faculty member to join its multidisciplinary Department of Quantitative Health Sciences on the Cleveland, Ohio main campus. This is a full-time position consisting of 35% teaching, 35% collaboration, and 30% research. A doctoral degree with expertise in epidemiology, biostatistics or a related discipline is required. The position includes non-tenured appointment to the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University at rank commensurate with experience, and candidates should have substantial interest in teaching epidemiological and other research methods courses to medical students and CC trainees. Candidates should also enjoy collaborating on and bringing creative analytic approaches to complex problems in health care, and have a strong desire to publish journal articles. Excellent English language written and oral communication skills are essential.

### **Job Requirements**

- PhD in Epidemiology, Biostatistics, or related discipline.
- Experience as a collaborative biostatistician in a clinical setting.
- Knowledge of and experience with analytical methods for observational studies of clinical outcomes.

This is a 'hard money' position with no explicit requirements to obtain salary support and a matrix reporting environment consistent with its diverse responsibilities.

Interested candidates should email a curriculum vitae, teaching philosophy, the names of at least three references and a letter summarizing experience, research interests, and fit for the position to [QHSjobsearch@ccf.org](mailto:QHSjobsearch@ccf.org). Review of applications will begin August, 2021 and continue until the position is filled.
