We are pleased to announce that the Mass General Brigham Training Program in Precision & Genomic Medicine, supported by the National Human Genome Research Institute (NHGRI), is now accepting applications for the 2024-2026 academic cycle.

The MGB Training Program in Precision & Genomic Medicine, co-led by Jordan W. Smoller, MD, ScD, and Heidi Rehm, PhD, brings together three outstanding components to build a world-class training program in precision and genomic medicine: 1) an internationally-recognized faculty with expertise in precision and genomic medicine across a broad range of disciplines, 2) outstanding institutional resources bridging clinical, genomic, and data sciences, and 3) deep engagement with cutting edge, collaborative initiatives at the regional, national, and international levels to provide rich training experiences.

**Funding is for 2-years and awards cover salary, travel to professional meetings, and other training-related expenses.** Trainees will perform research in their respective Mentor's lab but will participate in all T32 training related requirements (meetings, journal club, etc.)  throughout the Mass General Brigham Healthcare System.

For more eligibility and program information, as well as for a link to application materials, please visit our website at https://cgm.massgeneral.org/training-program/.  **Application materials are due February 23, 2024 at 5:00 PM, and the fellowship term begins July 2024.** Please direct any inquiries to Program Manager, Marina Wilson (mwilson49@mgh.harvard.edu).
