

Description: The Ky Lab has one funded postdoctoral position in the field of cardio-oncology clinical translational epidemiology and data science. This is a position for a clinical translational researcher within cardio-oncology, using large datasets comprised of biomarker, echocardiography, genomic, clinical, and other "-omic" data to understand individual patient risk. The ideal candidate will have a Ph.D. or M.D. with strong experience in epidemiology, data science, and the manipulation of large datasets. The ideal candidate must also be a very strong writer and also be able to independently determine study design and analysis. Competitive compensation for appropriate expertise.

Qualifications: Ph.D. or MD with a strong background in epidemiology and the application/manipulation of large datasets.

Key words: cardiovascular, epidemiology, cardio-oncology, translational research, risk prediction, deep phenotyping
