Analysis of the 1990 Clean Air Act Amendments

Air Quality, Health, and Regulation

Accountability Assessment

- Long term exposure to air pollution is bad for health.
- EPA estimates \approx \$25 billion per year on air quality management.
 - 1970 Clean Air Act.
- For a **specific** regulatory action:
 - What were the causal effects on air quality?
 - What were the causal effects on health?

Corwin M. Zigler

Spatial Hierarchical Model

Assessing Interference Assumptions

Analysis of the 1990 Clean Air Act Amendments

1990 Clean Air Act Amendments (CAAA)

EPA designates counties as:

- 1 Attainment of air quality standards for PM₁₀.
- 2 Nonattainment of air quality standards for PM₁₀ :
 - Required **states** to implement plans to achieve standards.

What were the **causal effects** of the 1990 nonattainment designations for PM_{10} on:

- Pollution
 - Ambient concentrations of PM₁₀ and O₃ in 1999-2001.
- Health
 - All-cause Medicare mortality in 2001.

Potential Outcomes and Interference

Spatial Hierarchical Model

Assessing Interference Assumptions

Analysis of the 1990 Clean Air Act Amendments

Spatial Hierarchical Model

$$X(s) = Z^{T}(s)\beta + W(s) + \epsilon(s)$$

- $s \equiv$ specific location.
- X(s) ≡ 4-dimensional vector of pollution concentrations under both regulations (X_{A=0}(s), X_{A=1}(s)).
- $Z(s) \equiv \text{covariates.}$
- $\epsilon(s) \equiv \text{nonspatial ("nugget") error.}$
- $W(s) \equiv$ spatially-varying random intercepts.

Corwin M. Zigler

Specifying Spatial Structure

- **1** Specify *K*(*s*, *s*; *ν*)
 - Covariance matrix for potential pollution concentrations within a location.
 - Nonidentifiability \Rightarrow sensitivity parameter.
- 2 Specify spatial decay for each individual pollution concentration.
 - Separate isotropic exponential decay functions for each pollutant.
- - Computational feasibility.
 - Isoloate nonidentifiable associations between potential outcomes.

Corwin M. Zigler

Accountability for Air Quality

Potential Outcomes and Interference

Spatial Hierarchical Model

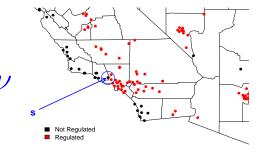

Assessing Interference Assumptions

Analysis of the 1990 Clean Air Act Amendments

Why a Spatial Model?

Predicting potential outcomes:

- Predict missing potential outcomes at *s* using information at surrounding locations.
- Use estimates of ν to assess interference assumption.

Assess Interference Assumption

$\hat{\nu}$ has implications of interference

- $\hat{\nu} \Rightarrow$ estimated correlation between measurements at two locations.
- Examine correlations between observations assumed not to interfere.
 - Substantial correlation \Rightarrow violation of AGIA.

Analysis of the 1990 Clean Air Act Amendments

Causal inference for accountability assessment

- Complex regulatory environment.
- Causal inference with spatial data.
- Principal stratification
 - Multivariate intermediate variable.
 - Multipollutant approach.
- Assumptions about interference between observations.
 - What do we assume?
 - How do we assess?
 - What are the implications of violations?
